

Platform:

MSM8998/SDM845

Issue description:

Some customers want to limit the PD charger voltage to 9V, for they don't want to PD output 12V

Solution:

PD charger output voltage is controlled by our QC4 bin file hvdcp_opti.bin, we don't release the source codes.

Default 8998/845 platform can support 12V.

If want to limit the output voltage, can set the property "persist.chg.max_volt_mv" to 9000mV.
