[Description]: how to change the vbus output at otg mode

[Platform]:msm8953 msm8937 msm8940

1. the vbus out mode is pinctrl by default.

Need to change it to cmd mode.

```
static int smbchg_hw_init(struct smbchg_chip *chip)

{

......

if (chip->otg_pinctrl) {

/* configure OTG enable to pin control active low */

rc = smbchg_sec_masked_write(chip, chip->otg_base + OTG_CFG,

OTG_PIN_POLARITY_BIT | OTG_EN_CTRL_MASK,

OTG_PIN_ACTIVE_LOW | OTG_PIN_CTRL_RID_DIS);

if (rc < 0) {

dev_err(chip->dev, "Couldn't set OTG EN config rc = %d\n",

rc);

return rc;

}

}

++rc = smbchg_sec_masked_write(chip, chip->otg_base + OTG_CFG,

OTG_EN_CTRL_MASK, OTG_CMD_CTRL_RID_EN);

...

}
```
